Setting up and connecting your printer
Windows

1 Network connection
Windows

The network connection is the best way to share your printer with your team.

The HP Designjet 70 and 110plus can be connected to a network using HP Jetdirect print servers, which are available as optional accessories. The HP Designjet 110plus nr is supplied with a Jetdirect print server already installed.

1. Make sure that the printer and the computer are both connected to the network.
2. Go to the printer's front panel and hold down the Power key while pressing the OK key four times.
3. The printer will print some pages of information about itself. Make a note of the printer's IP address, shown in the TCP/IP section on the first page.
4. Insert the *HP Designjet Driver and Documentation* CD into your CD drive. If the CD does not autorun, run the SETUP.EXE program in the root folder of the CD.
5. Follow the instructions on your screen to set up the printer.
6. When asked how the printer is connected, choose 'Connected via the network'.
7. When asked what network setup you require, choose 'Basic network setup'.
8. Select your printer from the list. If you have more than one HP Designjet printer, use the IP address that you noted earlier to confirm that you have selected the correct printer.
9. The network settings of the selected printer are displayed. Check that they are correct, then click 'Next' to continue.
10. Select your printer model and click 'Next' to continue.
11. Click 'Next' until you have completed the installation of the printer driver.

2 USB connection
Windows

USB is the preferred solution for a direct computer-to-printer connection.

1. **Do not connect the computer to the printer yet.** You must first install the printer driver software on the computer, as follows.
2. Insert the *HP Designjet Driver and Documentation* CD into your CD drive. If the CD does not autorun, run the SETUP.EXE program in the root folder of the CD.
3. Follow the instructions on your screen to set up the printer.
4. When asked how the printer is connected, choose 'Connected directly to this computer'.
5. Choose USB and click 'Next'.

1. Turn off both printer and computer before connecting them via the parallel port, to avoid damaging your equipment.
2. Connect the parallel cable from your computer to the printer.
3. Turn on the computer and the printer.
